BLOOMSDALE SAVOY SPINACH

CULTURE—This is a very important crop in our market gardens, and is one of the most easily managed of all vegetables, requiring but little culture, and may be had fit for use the entire season. The main crop is sown in September. For summer use it may be sown at intervals of two or three weeks from April to August.

New Zealand—Entirely different from the true spinach in type in that it thrives during the hot weather in any soil, rich or poor. Pkt., 5c.; oz., 10c.; $\frac{1}{4}$ lb., 20c.

Bloomdale Savoy-leaved—A heavy cropper, of fine quality and very hardy; succulent leaves, curled and crinkled like a Savoy cabbage; hardiest and most productive. 1 oz., 10c.; $\frac{1}{4}$ lb., 15c.; 1 lb., 35c.; 10 lbs., \$2.00.

Prickly or Winter—Very vigorous and hardy. 1 oz., 10c.; $\frac{1}{4}$ lb., 20c.; 1 lb., 50c.

King of Denmark—Leaves are large, round, deep green. Oz., 10c.; $\frac{1}{4}$ lb., 15c.; 1 lb., 35c.

TOBACCO SEED

One ounce will sow 25 feet square, and produce plants for one acre.

Fine Havana—Finest strain of imported seed. 40c. oz.

SQUASH

German, Kurbles, Zucca, Mielkuzr.

One ounce Early will plant 50 hills; one ounce Marrow, 25 hills.

CULTURE—The plants are very tender and sensitive to cold, and planting must be delayed until settled, warm weather. The general principles of culture are the same as those given for cucumbers and melons, but the plants are less particular as to soil. The summer varieties should be planted 4 feet apart each way and the winter sorts 8 feet. Three plants are sufficient for a hill. Care should be taken not to break the stems from the Squashes intended for winter use, as the slightest injury will increase the liability to decay.

MAMMOTH WHITE BUSH SQUASH

Cocozelle or Italian Marrow (65 days)—A bush variety that produces squashes a foot long that the prepared for the table like eggplant. Use when about 8 inches long; very productive, tender and delicious. Pkt., 5c.; oz., 15c.; ¼ lb., 40c.; 1 lb., \$1.25.

Mammoth White Bush Scallop—Similar to Early White Bush, except that it is much larger. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., 75c.

Giant Summer Crookneck—Double the size of the ordinary Crook-neck and very warty, but similar in other respects. Their handsome appearance commands an extra price in the market. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., 90c.

Improved Hubbards—The well-known and standard late variety; our strain is excellent. 1 oz., 20c.; ¼ lb., 35c.; 1 lb., \$1.00.

Mammoth Yellow Bush Scallop—Same as White Bush except in color. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., \$1.00.

Ford Hook—Skin bright yellow; flesh color; is very dry and sweet; one of the handsomest and best keeping winter varieties. 1 oz., 15c.; ¼ lb., 35c.; 1 lb., \$1.00.

Boston Marrow—Fine fall variety; oval bright orange; flesh yellow and firm; best for pies, and also for canning. 1 oz., 15c.; ¼ lb., 25c.; 1 lb., 75c.; 10 lbs., 65c. per lb.

TOMATOES

German, Liepsafel, Pomo d'Ora, Pompidoro. One ounce will produce 1,500 plants.

CULTURE—The Tomato is raised from seed, which should be sown in the hotbed about February 20, and continuous sowings made until April 1, according as the plants are wanted for use. When the plants are about 2 inches high, transplant to 4 inches apart, and after three or four weeks transplant from the hotbed into a cold frame, setting the plants 8 inches apart each way. (A cold-frame is simply a low wooden frame covered with glass used to protect such plants as are not sufficiently hardy to withstand our winters). Keep the plants cool, so as to make them stocky. Set out in the open ground about June 1, in well-enriched soil, setting the plants 5 feet apart each way.

Break O'Day—This new, early tomato—a cross between Earliana and Marglobe, has made quite a sensation among gardeners and canners wherever it has been seen. At the Cornell Agricultural College Experimental grounds the past season, Break O'Day produced the earliest ripe fruit and the largest yield of ripe fruits the first two weeks of picking, in competition with all the standard early varieties as well as the newer kinds. Pkt., 10c.; oz., 30c.; ¼ lb., 75c.; 1 lb., \$2.75.

Pritchard Scarlet Topper—New—An extra-early, large, smooth, and extremely solid Tomato of an intense scarlet color. Most productive and very attractive. Of a solidity that is truly remarkable, with very small seed pockets and no core. Pkt., 15c.; oz., 40c.; ¼ lb., \$1.00; 1 lb., \$3.50.

EARLIANA TOMATO

Earliana—New. Claimed to be the earliest; large, smooth, red; very prolific. 1 oz., 35c.; ¼ lb., 85c.; 1 lb., \$2.75.

Bonny Best—One of the best and most prolific of early tomatoes. The size is not so large, but it is very solid and evenly bright red. 1 oz., 35c.; ¼ lb., 85c.; 1 lb., \$2.75.

New Stone—A great favorite with canners; the heaviest and most solid-fruited of the large Tomatoes of good quality. Our stock is distinctly superior to most of that offered under this name, being more uniform, better colored and larger. Fruit round, apple-shaped, very large, deep red, and astonishingly heavy. 1 oz., 25c.; ¼ lb., 75c.; 1 lb., \$2.50.

Certified Marglobe—This new main-crop or mid-season tomato is a wilt-resistant variety bred for use in disease infected districts. In addition to being wilt-resistant, it is a handsome deep red globe shaped tomato of great merit. The plants are vigorous and productive and the fruits are quite large. In our trials they averaged 7½ ounces in weight. Oz., 40c.; ¼ lb., \$1.00; 1 lb., \$3.50.

Ponderosa—Pkt., 10c.; 1 oz., 45c.; ¼ lb., \$1.00.

Yellow Plum—Oz., 45c.; ¼ lb., \$1.50.

Large Yellow Tomato—A good eating tomato. Oz., 40c.; ¼ lb., \$1.20.

Oxheart—A wonderfully fine slicing variety. Main crop sort, producing large, pink fruit, bulging near the stem and tapering almost to a point. Very solid, with almost no seed cells. The largest tomato. Oz., 50c.; ¼ lb., \$1.75.

Rutgers—A recent development introduced by the New Jersey Agricultural Experiment Station. Fruits medium to large, similar in shape to Marglobe, but slightly more flattened. Highly recommended as a second early maturing variety for canning and tomato juice. Pkt., 10c.; oz., 35c.; ¼ lb., 85c.; 1 lb., \$3.00.

TURNIPS

Three ounces of seed will sow 100 yards of row. Four pounds to the acre. Matures for table in from 60 to 90 days, according to variety and season.

Turnip seed may be sown when the Peach is in bloom, or among the first seeds in early spring; indeed, the only hope of a successful spring crop maturity extends into hot weather, when the bulb becomes fibrous and pungent, on application.

EARLY RED TOP GLOBE TURNIP

The seed of Cattle Turnips is always drilled in rows, while the early maturing and surface-rooted table Turnip is generally sown broadcast. We advise the sowing, either in drills or broadcast, of not less than three pounds to the acre to insure a satisfactory stand.

Southern Seven Top (50 days)—This variety of turnip is grown exclusively for its large green top-leaves which are excellent for salads or boiling greens. It does not form an edible root. Oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Early Flat Red or Purple Top (Strap-leaved), 60 days—The oldest standard red. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Bloomsdale Swede or Yellow Ruta-Baga (maturing in 90 days)—The Bloomsdale is quite wonderful in its fine breeding. In nothing that we offer are the effects in selection and in careful breeding so apparent as in this Ruta-Baga. Oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Golden Ball—1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.

Yellow Globe—A splendid sort for general crop; grows large, a good keeper, with bright yellow flesh. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 45c.

Large Early Red Top Globe, 65 Days—Large size, rapid growth, unusually attractive and admired by all. A very much heavier producer than either of the preceding. We confidently recommend it. 1 oz., 10c.; ¼ lb., 20c.; 1 lb., 50c.
